It records binary control signals from the field, e.g. B. from sensors, encoders, switches or proximity switches. The terminal has CAGE CLAMP®S connections and thus enables solid conductors to be plugged in directly. Each input channel is preceded by an RC filter with a time constant of 3.0 ms to suppress interference. The signal status of each channel is displayed with a green status LED. The field and system levels are galvanically isolated from each other.
