Wall cabinet empty 2FB, 7-row A27 Type of installation surface-mounted/flush-mounted/partially recessed, material sheet steel, installation depth 190.1mm, protection class (IP) IP44, protection class (NEMA) other, height 1100mm, width 550mm, depth 215mm, the wall cabinets of the ComfortLine series A without interior fittings are designed for surface mounting, flush mounting and partially recessed mounting. The distributors are used, for example, in the interior of residential, functional and industrial buildings. The housings are delivered with a door and have a variety of cable entry options in the upper or lower connection compartment. There is plenty of space on the side for cable entry and routing. A generous membrane flange is mounted at the top for each field width, with which the cables can be inserted easily, quickly and safely. Another advantage is the wide door opening angle of 120°. Furthermore, the doors can be easily removed if required and adjusted using the stepless door hinge. Thanks to the QMS snap-in technology, the expansion with meter, distribution panels, combination sets, CombiLine modules or EDF mounting frame can be implemented individually according to customer requirements. Due to the flat design, the distributor can be integrated very well into any environment. The housings meet protection class IP44 and have a VDE test mark. Applicable standards: DIN VDE 0603-1, DIN 43870-1, color white RAL 9016 and powder-coated.
