Motor protection relay with error memory TMR-E12 mFS 2W 24UC Number of measuring circuits 1, number of contacts as NC contact 0, number of contacts as NO contact 0, number of contacts as changeover contact 2, external reset possible, error storage possible, rated control supply voltage U_s 24 ... 24V, height 75mm, width 22.5mm, depth 100mm, The thermistor relay is used as a protective relay for motors against thermal overload (impermissible heating). This heating can occur as a result of mechanical overload on the shaft or when the motor is operated with impermissible voltages. A PTC thermistor is used as a sensor, which is placed on the part of the motor that heats up the most when overloaded (e.g. integrated in the motor winding). The device can also be used with motors in which a thermal switch is integrated. Integrated error memory with reset button on the front, or connection of an external reset button (terminals B1 - B2). Variants: 230 V AC or 24 V AC/DC, 1 changeover contact or 2 changeover contacts

* Note on delivery time: Day = Monday to Friday, no public holiday in Bavaria or Saxony. Goods are also delivered on Saturdays (DHL).

** Payment methods may vary from country to country. All prices plus shipping and excluding customs duties or other additional costs (import sales tax) for deliveries outside the EU.

*** Savings compared to RRP = the manufacturer's recommended retail price. RRP is the price recommended to retailers by the manufacturer, importer or wholesaler as a resale price to the customer. The RRP is also referred to as the list price and is defined as the highest possible price that a buyer would pay for a specific product before any discounts (Source of gross list prices: Germany).
